

# BIOL-219: HUMAN PHYSIOLOGY

---

## Effective Term

Fall 2026

## CC Approval

12/05/2025

## AS Approval

12/11/2025

## BOT Approval

12/18/2025

## COCI Approval

02/26/2026

## SECTION A - Course Data Elements

### CB04 Credit Status

Credit - Degree Applicable

### Discipline

Minimum Qualifications	And/Or
Biological Sciences (Master's Degree)	

### Subject Code

BIOL - Biology

### Course Number

219

### Department

Biology

### Division

Science and Engineering (SE)

### Full Course Title

Human Physiology

### Short Title

Human Physiology

### CB03 TOP Code

0410.00 - Anatomy and Physiology

### CB08 Basic Skills Status

NBS - Not Basic Skills

### CB09 SAM Code

E - Non-Occupational

### Rationale

Update DEI and dating.

## SECTION B - Course Description

### Catalog Course Description

An introduction to the function of the human body, emphasizing mechanisms of homeostasis and integration at the biochemical, cellular, tissue, organ, and organ system levels. Laboratory exercises include measurement and analysis of physiological data and study of structure-function relationships in body tissues and organs. Primarily intended for students pursuing an Associates Degree in Nursing, A.S. degree in Respiratory Care, or B.A./B.S. degree in a Health Sciences field.

## SECTION C - Conditions on Enrollment

### Open Entry/Open Exit

No

### Repeatability

Not Repeatable

### Grading Options

Letter Grade or Pass/No Pass

### Allow Audit

Yes

## Requisites

### Prerequisite(s)

Completion of CHEM-110 and BIOL-105 or BIOL-120 with a minimum grade of C.

### Advisory Prerequisite(s)

Completion of BIOL-218 with a minimum grade of C.

## Requisite Justification

### Requisite Description

Course in a Sequence

### Subject

BIOL

### Course #

105

### Level of Scrutiny

Content Review

### Upon entering this course, students should be able to:

1. Current working knowledge of basic biology vocabulary, including cell structure and function; mitosis and meiosis; chemistry of life, including protein synthesis and DNA replication; ATP and cell metabolism.
2. Understanding of biochemistry, including properties of molecules and chemical bonds; energy exchange and conservation; ions and acid/base balance.
3. Structure of atoms and molecules, elements, chemical bonds, chemical reactions, ions, acids and bases.
4. Measurement and calculation of physical and chemical quantities including units and conversions.
5. Basic laboratory practices and safety.

---

### Requisite Description

Course in a Sequence

### Subject

BIOL

### Course #

120

### Level of Scrutiny

Content Review

### Upon entering this course, students should be able to:

1. Current working knowledge of basic biology vocabulary, including cell structure and function; mitosis and meiosis; chemistry of life, including protein synthesis and DNA replication; ATP and cell metabolism.
2. Understanding of biochemistry, including properties of molecules and chemical bonds; energy exchange and conservation; ions and acid/base balance.
3. Structure of atoms and molecules, elements, chemical bonds, chemical reactions, ions, acids and bases.

4. Measurement and calculation of physical and chemical quantities including units and conversions.
5. Basic laboratory practices and safety.

**Requisite Description**

Course in a Sequence

**Subject**

CHEM

**Course #**

110

**Level of Scrutiny**

Content Review

**Upon entering this course, students should be able to:**

1. Current working knowledge of basic biology vocabulary, including cell structure and function; mitosis and meiosis; chemistry of life, including protein synthesis and DNA replication; ATP and cell metabolism.
2. Understanding of biochemistry, including properties of molecules and chemical bonds; energy exchange and conservation; ions and acid/base balance.
3. Structure of atoms and molecules, elements, chemical bonds, chemical reactions, ions, acids and bases.
4. Measurement and calculation of physical and chemical quantities including units and conversions.
5. Basic laboratory practices and safety.

**SECTION D - Course Standards****Is this course variable unit?**

No

**Units**

5.00000

**Lecture Hours**

54

**Lab Hours**

108

**Outside of Class Hours**

108

**Total Contact Hours**

162

**Total Student Hours**

270

**Distance Education Approval****Is this course offered through Distance Education?**

Yes

**Online Delivery Methods**

DE Modalities	Permanent or Emergency Only?
Hybrid	Permanent

## SECTION E - Course Content

### Student Learning Outcomes

**Upon satisfactory completion of the course, students will be able to:**

1. Communicate understanding of physiological processes including mechanisms of homeostasis.
2. Critically evaluate physiological function in normal and disease states.
3. Perform basic physiological measurements and analyze physiological data quantitatively.

### Course Objectives

**Upon satisfactory completion of the course, students will be able to:**

1. Explain the principle of homeostasis and provide examples of homeostatic control mechanisms in the body.
2. Recognize the chemical structures of the major classes of biomolecules and describe their major roles in living cells.
3. Relate biological structure to function at the cellular, tissue, organ, and organ system levels of organization.
4. Explain mechanisms of cellular communication in the nervous, sensory, and endocrine systems.
5. Describe the function and regulation of the major organ systems of the body and provide examples of integration among these systems.
6. Compare physiological function in normal and disease states such as diabetes, cardiovascular disease, and obstructive pulmonary disease.
7. Perform physiological measurements and apply quantitative methods to analyze physiological data.

### Course Content

Lecture content includes:

1. Homeostasis and feedback control systems
2. Organization and function of the cell membrane, cells, and tissues
3. Body fluid compartments
4. Chemistry of life
5. Cellular metabolism
6. Membrane permeability and transport
7. Membrane potentials and action potential
8. Cell-cell communication
9. Nervous system organization and function
10. Sensory transduction and sensory systems
11. Endocrine system organization and function
12. Muscle structure and function
13. Cardiovascular system function and regulation
14. Lymphatic system and immune function
15. Respiratory physiology function, regulation, and blood gas transport
16. Renal physiology: osmoregulation, excretion, electrolyte balance, and acid-base balance
17. Digestive system function and regulation
18. Reproductive systems function and regulation
19. Clinical applications of physiology

Laboratory content includes:

1. Performing scientific measurements and data analysis
2. Doing calculations with physiological variables and units
3. Preparing dilutions and measuring concentration of solutions
4. Observing osmotic effects in cells and dialysis membrane sacs
5. Identifying basic tissue types and their functional properties
6. Studying anatomical models and dissected specimens
7. Observing and interpreting function of sensory systems
8. Electromyogram and electrocardiogram recording and analysis
9. Blood pressure measurement
10. Measuring respiratory volumes by spirometry
11. Evaluating acid-base balance using case studies
12. Performing urinalysis

## Methods of Instruction

### Methods of Instruction

Types	Examples of learning activities
Discussion	
Experiments	
Lab	
Lecture	

### Online Adaptation

Types	Examples of learning activities
Activity	
Directed Study	
Discussion	
Group Work	
Individualized Instruction	
Journal	
Lecture	

### Instructor-Initiated Online Contact Types

Announcements/Bulletin Boards  
 Chat Rooms  
 Discussion Boards  
 E-mail Communication  
 Telephone Conversations  
 Video or Teleconferencing

### Student-Initiated Online Contact Types

Chat Rooms  
 Discussions  
 Group Work

### Course design is accessible

Yes

## Methods of Evaluation

### Methods of Evaluation

Types	Examples of classroom assessments
Exams/Tests	Exams include 3-4 midterm exams, 2 laboratory exams, and a cumulative final exam.
Quizzes	Biweekly quizzes cover lecture and lab topics.
Class Participation	Class participation is based on engagement in lab exercises, group learning activities and class discussions.
Homework	Homework assignments include problem-solving exercises, laboratory data analysis, and written answers to questions from the lab exercises.
Lab Activities	Lab activities include measurement and analysis of physiological data, study of functional anatomy and histology, and case studies.

## Assignments

### Reading Assignments

Textbook and laboratory manual reading assignments.

For example:

Read Chapter 2 in the textbook in preparation for lecture and discussion on protein structure and function.

Read Exercise 6.2 Introduction and Procedure sections prior to the laboratory on protein measurement.

**Writing Assignments**

Recording of laboratory observations, analysis of data, and answering questions assigned in the lab manual.

For example:

Write a short report on results of the serial dilution lab exercise. Include a plot of your standard curve of absorbance versus concentration and show how you determined the concentration of the unknown solution using the standard curve.

**SECTION F - Textbooks and Instructional Materials**

**Material Type**

Textbook

**Author**

Silverthorn, D.U.

## SECTION G - Diversity, Equity and Inclusivity

### How does your course and/or course outline of record reflect strategies for accommodating and engaging diverse student populations, advancing equitable outcomes, and fostering inclusion for all students?

This course supports diverse student populations through the use of multiple representations of concepts, varied applications, and technology. Strategies may also include collaborative learning, transparent assessment practices, low-cost resources, and opportunities for students to connect course material to their own experiences, fostering equitable outcomes and an inclusive classroom environment.
