**CB08 Basic Skills Status**

NBS - Not Basic Skills

**CB09 SAM Code**

E - Non-Occupational

**Rationale**

Update DEI.

## SECTION B - Course Description

### Catalog Course Description

This course is a continuation of General Chemistry 1. Topics include solutions, acid-base and redox equilibria, thermodynamics, kinetics, pH, buffers, solubility product, complex ions, thermodynamics, electrochemistry, biochemistry and nuclear chemistry.

## SECTION C - Conditions on Enrollment

### Open Entry/Open Exit

No

### Repeatability

Not Repeatable

### Grading Options

Letter Grade or Pass/No Pass

### Allow Audit

Yes

## Requisites

### Prerequisite(s)

Completion of CHEM-120 with a minimum grade of C.

## Requisite Justification

### Requisite Description

Course in a Sequence

### Subject

CHEM

### Course #

120

### Level of Scrutiny

Content Review

### Upon entering this course, students should be able to:

1. Define and use basic terms and concepts including atom, ion, charge, atomic number, mass number, atomic mass, element, compound, mixture, solution, energy state, molecule, molecular formula, and isotope.
2. Write ionic and covalent formulas, and name simple ionic and covalent compounds
3. Classify chemical reactions and write balanced chemical-reaction equations.
4. Employ the mole concept to determine the amount of material changing in chemical reactions, involving solids, liquids, solutions and gases.
5. Use variations of the ideal gas law to determine the density, formula weight, pressure, and volume of gases.
6. Determine the energy and velocity of gases using the Kinetic Molecular Theory.
7. Draw the structure of compounds based on their electronic configurations using Lewis dot structures and Valence Shell Electron Pair Repulsion Theory. Distinguish between ionic and covalent bonding, and explain the organization and structure of the periodic table.
8. Calculate the energy of transition of electrons between principle quantum numbers using Quantum Theory and determine the shape of atomic orbitals and their hybrids.
9. Apply safety principles in the laboratory. Use balances, pipettes, burettes, and gas burners properly to obtain accurate and reliable measurements. Follow both verbal and written directions describing chemical experimental procedures.
10. Develop and test hypotheses; gather and evaluate evidence; and make appropriate conclusions.

---

## SECTION D - Course Standards

### Is this course variable unit?

No

**Units**

5.00

**Lecture Hours**

54.00

**Lab Hours**

108.00

**Outside of Class Hours**

108

**Total Contact Hours**

162

**Total Student Hours**

270

**Distance Education Approval****Is this course offered through Distance Education?**

Yes

**Online Delivery Methods**

DE Modalities	Permanent or Emergency Only?
Entirely Online	Permanent
Hybrid	Permanent
Online with Proctored Exams	Permanent

**SECTION E - Course Content****Student Learning Outcomes****Upon satisfactory completion of the course, students will be able to:**

1. Communicate chemical and physical processes at the molecular level and how they relate to the macroscopic environment.
2. Solve both qualitative and quantitative chemistry problems while demonstrating the reasoning clearly and completely.
3. Implement laboratory techniques correctly using appropriate safety procedures and express them clearly in written laboratory reports.

**Course Objectives****Upon satisfactory completion of the course, students will be able to:**

1. Explain the development of chemical principles and concepts based on experiments.
2. Analyze and solve complex or extended problems involving mathematical skills as well as an ability to place these problems in an environment, biological, economic or social context.
3. Design a laboratory experiment by defining the problem, collecting data, obtaining results, deriving conclusions, and preparing a report to communicate the information to others in writing.
4. Explain the concepts related to rates of reaction, activation energies, mechanisms of reactions, as applied to the kinetic molecular theory.
5. Relate equilibrium information from chemical systems to the free energy, enthalpy and entropy. Determine the equilibrium constants and show how the spontaneity of the system is related to the driving force of the reaction.
6. Apply the equilibrium system concepts to acid/base, solubility, redox, and complex ion formation reaction systems.
7. Indicate how an electrochemical cell can be used to establish the standard free energy of a chemical reaction and measure the pH of a system.

**Course Content**

1. Chemical Kinetics
  - a. Rate Laws
  - b. Activation Energy

- c. Mechanisms
- d. Catalysis
- 2. Chemical Equilibrium
  - a. LeChatlier's Principle
  - b. Homogenous Systems
  - c. Heterogeneous Systems
- 3. Acids & Bases
  - a. Strong and Weak acids
  - b. pH
  - c. Buffers
  - d. Titration Curves
- 4. Applications of Aqueous Equilibria
  - a. Solubility
  - b. pH controlled Solubility
  - c. Complex Ions
  - d. Amphoterism
- 5. Spontaneity, Entropy and Free Energy
  - a. Effect of Temperature
  - b. Work and Efficiency
- 6. Electrochemistry
  - a. Balancing Oxidation-Reduction Reactions
  - b. Nernst Equation
  - c. Standard State Potentials
- 7. Nuclear Chemistry
  - a. Radioactive Decay
  - b. Carbon Dating
  - c. Half Life
  - d. Nuclear Transformations
- 8. Organic Chemistry
  - a. Nomenclature
  - b. Functional Groups
  - c. Free-Radical Halogenation
  - d. Substitution and Elimination Reactions
- 9. Topics in Biochemistry May Include
  - a. Enzyme Kinetics
  - b. Michaelis-Menton Equation
  - c. Lineweaver Burke Plot
  - d. Biological Buffers
  - e. Action Potential
  - f. Amino Acids and Zwitterions
  - g. Ionic Strength and Osmotic Pressure

## Methods of Instruction

### Methods of Instruction

Types	Examples of learning activities
Lecture	
Other	Chemical demonstrations. Video presentations. Individual and group problem solving in the classroom. Individual and group laboratory experiments. Peer oriented guided instruction where the students help one another under the guidance of an instructor.

### Online Adaptation

Types	Examples of learning activities
Activity	
Directed Study	
Discussion	

Group Work

Individualized Instruction

Group Work

#### **Course design is accessible**

Yes

### **Methods of Evaluation**

#### **Methods of Evaluation**

<b>Types</b>	<b>Examples of classroom assessments</b>
Exams/Tests	Four exams will be given, including the final exam. Exams will be fill in, multiple choice, true/false, and short answer, and will be graded on a point scale. A sample question may be, "What is the pH of a 0.1M acetic acid solution?" or "How many steps are required for a fourth order reaction?" or perhaps, "Please draw a working electrochemical cell indicating the composition of the electrodes, cell concentrations, and direction of electron flow."
Other	Regular attendance in the laboratory. All labs will be checked off by the instructor prior to the student leaving the lab.

### **Assignments**

#### **Reading Assignments**

Daily reading of text; weekly reading of lab manual (ex: Read Chapter 15,"Chemical Thermodynamics," Sections 15.1 through 15.9 in your text and read the first lab, "The Kinetics of the Acid Decomposition of a Compound.")

#### **Writing Assignments**

Problem sets are provided for homework. Laboratory write-ups are assigned weekly. Sample tests/study sheets are provided for each of the four exams.

**SECTION G - Diversity, Equity and Inclusivity****How does your course and/or course outline of record reflect strategies for accommodating and engaging diverse student populations, advancing equitable outcomes, and fostering inclusion for all students?**

This course supports diverse student populations through the use of multiple representations of concepts, varied applications, and technology. Strategies may also include collaborative learning, transparent assessment practices, low-cost resources, alternative formative assessment, structured opportunities for direct communication with the instructor, and opportunities for students to connect course material to their own experiences, fostering equitable outcomes and an inclusive classroom environment.
